## EARS, Eurofleets Automatic Reporting System

**Susana Diez**

## RVs data

This comprises underway data acquisition systems, human operations and by (un)deploying (a group of) sensors like frames, ROVs, AUVs or floats.

- En-route data acquisition by a platform: navigation, meteorology, thermosalinometry
- Human operations: physical measurements such as a CTD profile, sediment or biota samples; multibeam data, etc
- Long-term timeseries by deployed sensors

# Open Data Management Strategy

To ensure that the research and underway data collected by RVs are made widely available in line with FAIR and Open Research Data principles

In order to have FAIR Data -- > **metadata**

- Information about the cruise: who, when, what, how, ...
- Information about the events

Use of **controlled vocabularies** + rules & relations → **Ontologies**

BODC vocabularies

C17 Platform Code  
L06 Platform Class  
L05 Instrument  
L22 Sensor Model  
P02 Parameter

**Event** is defined by the triplet:  
tool, process, action

# EARS: Eurofleets Automatic Reporting System

Advancing the shipboard data management system for:

- registering underway and events data
- (near) real-time transfer to shore and EVIOR portal
- Generating CSR (Cruise Summary Report) metadata files

# Outfitting the Eurofleets+ fleet

So far EARS has been installed on 14 RVs

## EARS3 Installation

- **EARS Server** + web app (V3): (virtual) server
- **EARS Client**: client desktop application on PC

## **SERVER** Single Virtual Machine (or self-managed)

- VirtualBox/Hyper-V/VMWare running Ubuntu Linux (memory stick)
- Has all EARS Server components, transform UDP navigation datagram to EARS format, sending to shore, VPN for remote access
- Make available on LAN, specifically to computer that will host client application

- Internet connection and SSH access is very useful for remote troubleshooting and updates

## EARS datagrams

EARS needs NAV, TSS & MET datagrams put on the network (UDP not serial)

If serial then MOXA Nport

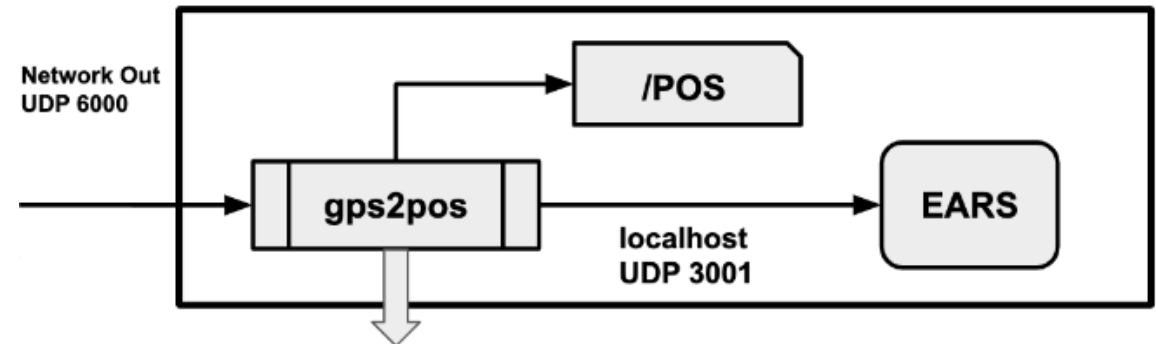

Transformation is  
needed, script  
included in VM

## Support:

- Normally no Linux commands required
- Installation based on the manuals first, interventions only for emergencies

## EF DASHBOARD

- The information exchange from EARS to the Dashboard is arranged by adoption and adaptation of the open-source SeaDataNet Sensor Web Enablement (SWE) toolkit developed by 52°N. The adapted SWE Toolkit has been installed and configured at UTM-CSIC
- An EF+ Data Hub for the underway data (nav, met, and tss) and events has been deployed at UTM-CSIC. Information from the Data Hub provides the input for the Dashboard.
- Data transfer:
  - RV: EARS VM, RV sends datagrams to data hub or query from CSIC to RV WS
